## DETAILED ACTION

### *Claim Rejections - 35 USC § 112*

Claims 36-39, 44-47 are rejected under 35 U.S.C. 112, second paragraph, as being incomplete for omitting essential steps, such omission amounting to a gap between the steps. See MPEP § 2172.01. The omitted steps are: the addition of washing aid agents to the detergent, since the prior claim only recites the electrolysis of water followed by the mixing of the cathode and anode water.

### *Claim Rejections - 35 USC § 103*

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

Claims 29-33, 35, 40-42 are rejected under 35 U.S.C. 103(a) as being unpatentable over Suzuki of record.

The reference discloses the step of electrolyzing water containing including the recited carbonates (see pages 4-5). The reference further discloses the mixing of the anode and cathode, since the reference teaches that the anode water is supplied at one side and the cathodic or alkali water is supplied to another side (see page 5, lines 1-2).

The reference does not explicitly disclose the dilution of the detergent, however, when the acidic anodic water contacts the basic cathodic water, excess water will be produced which will dilute the detergent.

Consequently, the invention as a whole would have been obvious to one having ordinary skill in the art at the time the invention was made to modify the disclosure of the Suzuki reference, because one having ordinary skill in the art would reasonably ascertain that the feeding of both the anodic and cathodic water to opposite sides of a tub would cause mixing to form the claimed detergent. Further the pH and concentrations would further be obvious to one having ordinary skill in the art at the time the invention was made, because such modification to result effective variables has been held to be within the skill of the ordinary artisan.

#### *Response to Arguments*

Applicant's arguments with respect to claims 29-47 have been considered but are moot in view of the new ground(s) of rejection.

*Conclusion*

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the date of this final action.
